XM Satellite Radio has become such a part of my life that I don't know how I commuted without it. My husband and I both subscribe because of the variety of channels and the lack of commercials. We travel alot and the weather and traffic information could be potentially life saving for us. Please reject the National Association of Broadcaster's petition 04-160. There is absolutely no reason that XM shouldn't be able to make a good thing even better.
